

Experiment: 8

Steering Angle Variation in MIMO Beamforming Using MATLAB

Aim

To analyze the effect of steering angle variation in a MIMO beamforming system by studying steering angle, array gain, and beam direction error using MATLAB.

Objectives

1. To analyze the steering angle of a MIMO beamforming system by directing the beam towards different target directions using MATLAB.
2. To compare the array gain achieved for different steering angles in a MIMO beamforming system using MATLAB.
3. To evaluate the beam direction error between the desired steering angle and the actual beam direction using MATLAB.

Objective – 1 Analyze Steering Angle (Degrees)

```
clc;
```

```
clear;
```

```
close all;
```

```
angle = [-60 -30 0 30 60]; % Steering Angles (degrees)
```

```
gain = ones(size(angle)); % Normalized Gain
```

```
figure
```

```
polarplot(deg2rad(angle), gain,'o-','LineWidth',2)
```

```
title('Steering Angle Variation in MIMO Beamforming')
```

OUTPUT

Objective – 2 Compare Array Gain (dB)

MATLAB Code:

```
clc;
clear;
close all;
angle = [-60 -30 0 30 60]; % Steering Angles (degrees)
gain = [9 12 15 12 9]; % Array Gain (dB)
figure
bar(angle, gain)
grid on
xlabel('Steering Angle (Degrees)')
ylabel('Array Gain (dB)')
title('Array Gain for Different Steering Angles')
```

OUTPUT

Objective – 3 Evaluate Beam Direction Error (Degrees)

MATLAB Code:

```
clc;
clear;
close all;
desired = [-60 -30 0 30 60]; % Desired Steering Angle (degrees)
actual = [-58 -32 1 29 62]; % Actual Beam Direction (degrees)
error = abs(desired - actual); % Beam Direction Error
figure
plot(desired, error, 'o-', 'LineWidth', 2)
grid on
xlabel('Desired Steering Angle (Degrees)')
ylabel('Beam Direction Error (Degrees)')
title('Beam Direction Error for Different Steering Angles')
```

OUTPUT
